Embry, Brandon MRN: 4748498, DOB: 9/7/1986, Sex: M Adm: 2/18/2019, D/C: 2/22/2019

02/18/2019 - ED to Hosp-Admission (Discharged) in Nursing Unit - High Point: Main Hospital

Reason for Visit

Chief complaint: Headache

- Altered mental status, unspecified altered mental status type (primary)
 Nonintractable headache, unspecified chronicity pattern, unspecified headache type
- Acute respiratory failure with hypercapnia
- Acute psychosis
- Hand pain, right Wrist pain, right
- Hand pain, left

Hospital problem: Acute psychosis

HPMC Hospitalist Discharge Summary

Identifying Information:

Brandon Embry 9/7/1986 4748498

Admit date: 2/18/2019

Discharge date: 2/22/2019

Discharge Service: HPMC Hospitalist

Discharge Attending Physician: Milton Randall Dalbow, MD

Discharge to: Home

Discharge Diagnoses:

Principal Problem:

Acute psychosis (HCC) Resolved Problems:

* No resolved hospital problems. *

Hospital Course:

32 y/o M here with acute encephalopathy and agitation. Shortly after arrival in the ED his MS deteriorated further into a near comatose state necessitating intubation. He reportedly was acting strange at work and was sent for UDS which was negative. He was admitted to the ICU, sedated and remained on vent for several days. He was extubated earlier in his stay with hope that his encephalopathy had resolved. Shortly after extubation he became combative including spitting at staff, flailing his arms around wildly. He was re-intubated for airway protection and remained so until 2/21/19.

Psych saw him on 2/22 and deemed him safe for d/c.

Discharge Day Services:

BP 115/49 | Pulse 68 | Temp 98.3 °F (36.8 °C) (Oral) | Resp 16 | Ht 1.778 m (5' 10") | Wt 119 kg (262 lb 4.8 oz) |

SpO2 94% | BMI 37.64 kg/m²

Pt seen on the day of discharge and determined appropriate for discharge.

GEN: NAD, lying in bed

EYES: EOMI ENT: MMM

CV: RRR, no murmurs appreciated

PULM: CTA B

Discharge Summary (continued)

same date. FINDINGS: The cardiac silhouette, mediastinal and hilar contours are normal and stable. The NG tube is coursing down the esophagus and into the stomach. The endotracheal tube is in good position with the tip 4.6 cm above the carina. The lungs remain clear. IMPRESSION: Endotracheal tube in good position at the mid tracheal level. Electronically Signed By: P. Gallerani M.D. On: 02/18/2019 19:25

Xr Chest Ap Portable

Result Date: 2/18/2019

CLINICAL DATA: Post intubation. EXAM: PORTABLE CHEST 1 VIEW COMPARISON: None. FINDINGS. Endotracheal tube in place with the tip approximately 3.8 cm above the level of the carina. Enteric tube within the stomach. The heart size and mediastinal contours are within normal limits. Normal pulmonary vascularity. Low lung volumes. No focal consolidation, pleural effusion, or pneumothorax. No acute osseous abnormality. IMPRESSION: 1. Appropriately positioned endotracheal and enteric tubes. 2. No active disease. Electronically Signed By; William T Derry M.D. On: 02/18/2019 14:02

Xr Wrist Right (routine: Ap,lat,obl)

Result Date: 2/21/2019

CLINICAL DATA: Hand and wrist pain. EXAM: RIGHT HAND - COMPLETE 3+ VIEW; RIGHT WRIST - COMPLETE 3+ VIEW COMPARISON: None. FINDINGS: Right hand and wrist; There is no evidence of fracture or dislocation. There is no evidence of arthropathy or other focal bone abnormality. Soft tissues are unremarkable. IMPRESSION: No acute osseous abnormality of the right hand and wrist. Electronically Signed By: William T Derry M.D. On: 02/21/2019 17:10

Xr Hand Left (routine: Ap,lat,obl)

Result Date: 2/21/2019

CLINICAL DATA: Acute left hand pain without known injury. EXAM: LEFT HAND - COMPLETE 3+ VIEW COMPARISON: None. FINDINGS: There is no evidence of fracture or dislocation. There is no evidence of arthropathy or other focal bone abnormality. Soft tissues are unremarkable. IMPRESSION: No significant abnormality seen in the left hand. Electronically Signed By: James Green Jr, M.D. On: 02/21/2019 17:12

Xr Hand Right (routine: Ap,lat,obl)

Result Date: 2/21/2019

CLINICAL DATA: Hand and wrist pain. EXAM: RIGHT HAND - COMPLETE 3+ VIEW; RIGHT WRIST - COMPLETE 3+ VIEW COMPARISON: None. FINDINGS: Right hand and wrist: There is no evidence of fracture or dislocation. There is no evidence of arthropathy or other focal bone abnormality. Soft tissues are unremarkable, IMPRESSION: No acute osseous abnormality of the right hand and wrist. Electronically Signed By: William T Derry M.D. On: 02/21/2019 17:10

Us Abdomen Complete

Result Date: 2/19/2019

CLINICAL DATA: Sepsis EXAM: ABDOMEN ULTRASOUND COMPLETE COMPARISON: CT 10/05/2018 FINDINGS: Gallbladder: No gallstones or wall thickening visualized. No sonographic Murphy sign noted by sonographer. Common bile duct: Diameter: Normal caliber, 3 mm Liver: No focal lesion identified. Within normal limits in parenchymal echogenicity. Portal vein is patent on color Doppler imaging with normal direction of blood flow towards the liver. IVC: No abnormality visualized. Pancreas: Visualized portion unremarkable. Spleen: Size and appearance within normal limits. Right Kidney: Length: 12.8 cm. Echogenicity within normal limits. No mass or hydronephrosis visualized. Left Kidney: Length: 13.8 cm. Echogenicity within normal limits. No mass or

Drug detection involves initial screening of samples for drugs, and in medical applications the screening tests results are directly used for medical evaluation. The screening procedure essentially eliminates all negatives, and positive results are regarded as presumptive and require confirmation using confirmatory methods such as high performance liquid chromatography and mass spectrometry. Confirmatory methods offer an accurate detection of drugs, but due to cost and labor requirements their application to routine and large-scale analysis is limited.

Screening methods are employed to enable rapid routine analysis of multiple sample. The samples are assigned as positive if the value is above a defined cut-off concentration.

Consent: The procedure was performed in an emergent situation.

Patient identity confirmed: arm band

Time out: Immediately prior to procedure a "time out" was called to verify the correct patient, procedure,

equipment, support staff and site/side marked as required.

Indications: airway protection

MRN: 4748498, DOB: 9/7/1986, Sex: M HIGH POINT NC 27262-4331 Adm: 2/18/2019, D/C: 2/22/2019

02/18/2019 - ED to Hosp-Admission (Discharged) in Nursing Unit - High Point, Main Hospital (continued)

ED Provider Note (continued)

Intubation method: video-assisted Patient status: paralyzed (RSI) Preoxygenation: nonrebreather mask

Sedatives: etomidate Paralytic: succinylcholine Laryngoscope size: Mac 3 Tube size: 7.5 mm Tube type: cuffed Number of attempts: 1 Cords visualized: yes

Fcs. procedure assessment: chest rise and CO2 detector

Breath sounce oqual ETT to ID: 24 cm

Tube secured with: ETT holder

Patient tolerance: Patient tolerated the procedure well with no immediate complications

Critical Care

Performed by: SHELDON, CHARLES BRYAN Authorized by: DALBOW, MILTON RANDALL

Total critical care time: 50 minutes

Critical care time was exclusive of separately billable procedures and treating other patients.

Critical care was necessary to treat or prevent imminent or life-threatening deterioration of the following conditions:

CNS failure or compromise.

Critical care was time spent personally by me on the following activities: discussions with consultants, evaluation of patient's response to treatment, ordering and review of laboratory studies, obtaining history from patient or surrogate, pulse oximetry, review of old charts, development of treatment plan with patient or surrogate, examination of patient, ordering and performing treatments and interventions, ordering and review of radiographic studies and re-evaluation of patient's condition.

ED Course/ED Assessment/Plan

ED Course as of Feb 18 1352

Mon Feb 18, 2019

Patient initially presented with headache and 1300 confusion, progressed to unresponsive by the time of my evaluation. He did not respond to verbal or noxious stimuli. No obvious abnormality on head CT to account for his mental status. He was returned to the ED and given Narcan 2mg without change.Continues to have sonorous respirations and concern for impending airway compromise. He was intubated in the ED as above. Labs still pending at the time, Dr. Stallings with ICU in the ED at bedside to evaluate. After RSI meds had worn off, the patient became more awake, following commands and Dr. Stallings decided to extubate him in the ED. He became

ED Provider Note (continued)

agitated, trying to sit up in bed and not cooperative. He was given a dose of Versed and Haldol per Dr. Stallings recommendations and he calmed down. He ultimately became unresponsive again, with sonorous respirations and no gag reflex. At this time, Dr. Stallings is planning re-intubation. [CS] Labs and imaging in the ED unremarkable, still not clear indication for his AMS. He is now reintubated and will be admitted to the ICU.

Patient was at work, complaining of headache and seemed altered per EMS. Patient states job sent patient in POV for drug screen. Patient stopped and McDonalds before going to get drug screen, and became sick/unresponsive in parking lot. EMS states patient was "strongly encouraged" to come to ED by police department. PD refused to let patient leave in vehicle. Patient did not receive field sobriety test.
